Market Research & Demand Generation Strategy – B2B Technology

Abhishek Pathak – Marketing & Strategy

CONTEXT

B2B technology companies rely heavily on demand generation campaigns to drive pipeline growth. However, increasing competition and longer buying cycles have made it more difficult to convert engagement into qualified leads.

PROBLEM

Despite running multi-channel campaigns, many organizations face:

- Low conversion rates from leads to opportunities
 - Ineffective messaging across diverse audience segments
 - Misalignment between marketing efforts and sales expectations
-

INSIGHTS

Analysis of campaign performance and CRM engagement data highlighted several issues:

- B2B buyers engage with multiple touchpoints (5–7 interactions) before making decisions
 - Generic messaging leads to lower engagement and weak conversion rates
 - Lack of segmentation results in irrelevant communication
 - Strong alignment between marketing and sales significantly improves pipeline outcomes
-

ACTION

To improve performance, I proposed a structured demand generation strategy focused on personalization and alignment.

Key recommendations included:

- Segmentation Strategy: Group audiences by industry, role, and engagement level
 - Lead Nurture Framework: Develop multi-step email workflows aligned with the buyer journey
 - Content Strategy: Create role-specific, value-driven content to improve relevance
 - Sales & Marketing Alignment: Establish shared KPIs and feedback loops to improve lead quality
-

IMPACT

This strategy is expected to:

- Increase engagement and email performance metrics
- Improve lead quality and conversion rates
- Strengthen alignment between marketing and sales
- Drive more predictable and scalable pipeline growth
